PROFESSIONAL PUSH TO TALK COMMUNICATIONS IN AIRPORTS

genaker
www.genaker.net

Experience secure and real-time walkie talkie type communications over existing mobile and WiFi networks using two way radios, regular smartphones and ruggedised handsets.

AIR TRANSPORT INDUSTRY USES

Ramp - Catering - Passenger services - Fuel - Baggage
- Pushback & Towing - Maintenance & overhaul

- Communicate without limitation of radio range or number of users.

- Employ shoulder mics, earpieces and vehicle mounted accessories.

- Optimise the review of your incidents through the *voice recording* functionality of the dispatching client (control centre).

- Increase the security of your work teams thanks to the *panic button*.

- *Geo-localise* all your vehicles and associates in real time.

- Interconnect Genaker Cloud PTT with your current radio infrastructure to enhance your coverage and extend the service to new users, including 'lone workers' who might need to communicate but are currently not able to do so.

Genaker Cloud PTT;

represents the most advanced solution to improve your associates productivity, reduce your response and execution times, manage the needs of your working teams and reduce operational costs in existing networks and communication infrastructures.
